#### **DETAILED ACTION**

Page 2

## Response to Arguments

1. Applicant's arguments with respect to claims 1-7 and 9-23 have been considered but are most in view of the new ground(s) of rejection.

# Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A paten't may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-7 and 19-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Russel WilburPogue, Jr. ('Pogue, Jr.' hereinafter), USP, 5,995,512 in view of. Sistanizadeh et al. ('Sistanizadeh' hereinafter), USP, 6,68,232.

Art Unit: 2166

With respect to claim 1,

Pogue, Jr. teaches a method for providing a topology interface for a multimedia processing system, the method comprising (see col. 6, lines 60-65, Fig. 9, Pogue, Jr.):

receiving by an application programming interface (see Fig. 1) a plurality of media parameters identifying at least an identifier, a node type, a data type and a duration (see col. 9, lines 64 to col. 10, lines 10, Pogue, Jr.); and

in response, creating by the application programming interface (see Fig. 1) a topology capable of being passed to a media processor as an extensible symbolic representation of an intended media flow based on at least one of the received media parameters (see col. 10, lines 15-25, Fig. 1, Pogue, Jr.).

Pogue, Jr. does not explicitly indicate claimed application programming interface.

Sistanizadeh teaches claimed application programming interface (Java Database Connectivity (JDBC) provides a standard application programming interface (API) which allows the SLM application to access relational data, in the IFS database in server, see col. 7, lines 48-51, Figs. 1, 6, Sistanizadeh).

It would have been obvious to one ordinary skill in the multimedia data processing art at the time of the present invention to modify the teachings of the cited references because application programming interface of Sistanizadeh's teaching would have allowed Pogue, Jr.'s system to monitor the operations of extended area of data communication network by analyzing semantic transparency or time transparency of data through the network based on the data to provided by the persistent layer module from the agents in the network as suggested by Sistanizadeh at col. 2, lines 56-60.

Art Unit: 2166

As to claim 2,

Pogue, Jr. teaches wherein the media parameters include one or more of a GetCacherObject, a GetNodeType, a GetTopoNodeID, a SetProjectStartStop, a GetProjectStartStop, a GetInputCount, a GetOutputCount, a ConnectOut, a GetInput, a GetOutput, a SetOutputPrefType, a GetOutputPrefType, a SetMajorType, a GetMajorType, a CloneFrom, a SetInputCount, a SetOutputCount, a SetStreamDiscardable, a GetStreamDiscardable, a SetOptionalFlag, and a GetOptonalFlag (see col. 25, lines 55-65, Fig. 6, Pogue, Jr.).

As to claim 3,

Pogue, Jr. teaches wherein the media parameters include a SetSourceAndDescriptor method that enables a topology loader to create a media stream based on a descriptor (see col. 7, lines 50-55, Fig. 1, Pogue, Jr.).

As to claim 4,

Pogue, Jr. teaches wherein the node type is a segment topology node type such that any modifications made to the topology to add, remove or connect nodes does not alter input and output nodes (see col. 16, lines 52-65, Pogue, Jr.).

As to claim 5,

Pogue, Jr. teaches wherein the unique identifier enables sharing and reusing the nodes in a plurality of topologies (see col. 10, lines 15-25, Fig. 1, Pogue, Jr.).

As to claim 6,

Art Unit: 2166

Pogue, Jr. teaches wherein the segment topology node type is created via an IMFSegmentTopologyNode: IUnknown interface (see col. 10, lines 15-25, Fig. 1, Pogue, Jr.).

As to claim 7,

Pogue, Jr. teaches wherein the segment topology node type is created via an IMFSegmentTopologyNode: IUnknown interface including one or more of GetSegmentTopology(IMFTopology\* pTopology), SegmentTopology(IMFTopology-\*\* ppTopology), SetDirty(BOOL bDirty), BOOL IsDirty(), BOOL GetActualOutputNode(long IOutputIndex, IMFTopologyNode\*\* ppActualNode, long\* plNodeOutputIndex), and BOOL GetActualInputNode(long IInputIndex, IMFTopologyNode\*\* ppActualNode, long\* plNodeInputIndex) (see col. 7, lines 50-55, Fig. 1, Pogue, Jr.).

Claims 19-23 have the same subject matter as of claims 1-7 segment of topology node and Pogue, Jr. teaches at col. 7, lines 50-55, Fig. 1 and essentially rejected for the same reasons as discussed above. Pogue, Jr. does not explicitly indicate claimed application programming interface. Sistanizadeh teaches claimed application programming interface (Java Database Connectivity (JDBC) provides a standard application programming interface (API) which allows the SLM application to access relational data, in the IFS database in server, see col. 7, lines 48-51, Figs. 1, 6, Sistanizadeh). It would have been obvious to one ordinary skill in the multimedia data processing art at the time of the present invention to modify the teachings of the cited references because application programming interface of Sistanizadeh's teaching would

Application/Control Number: 10/692,639 Page 6

Art Unit: 2166

have allowed Pogue, Jr.'s system to monitor the operations of extended area of data communication network by analyzing semantic transparency or time transparency of data through the network based on the data to provided by the persistent layer module from the agents in the network as suggested by Sistanizadeh at col. 2, lines 56-60.

### Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

### Remarks

5. Rotocil et teaches including claims limitation "symbolic representation,...."at para. 0058, 0078. Anderson and Hoffberg also teaches claimed subject matter.

#### Contact Information

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad Ali whose telephone number is (571) 272-4105. The examiner can normally be reached on Monday-Thursday (7:30 am-6:00 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain T. Alam can be reached on (571) 272-3978. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Mohammad Ali
